this textbook is about three key aspects of system design decision making under uncertainty trade off studies and formal risk analyses recognizing that the mathematical treatment of these topics is similar the authors generalize existing mathematical techniques to cover all three areas common to these topics are importance weights combining functions scoring functions quantitative metrics prioritization and sensitivity analyses furthermore human decision making activities and problems use these same tools therefore these problems are also treated uniformly and modeled using prospect theory aimed at both engineering and business practitioners and students interested in systems engineering risk analysis operational management and business process modeling tradeoff decisions in system design

explains how humans can overcome cognitive biases and avoid mental errors when conducting trade off studies and risk analyses in a wide range of domains with generous use of examples as a common thread across chapters this book this book provides an excellent road map for designing and producing competitive products

study drawings play a key role in the exploration and development of architecture in the early stages of design yet these principal tools for graphic thinking have been largely taken for granted in the design professions this guide brings study drawings into the foreground by analyzing actual drawings used by architects past and present architectural study drawings is the first source to provide a basis for understanding the primary means of graphic thinking used in the creation of these drawings it also explains versatile applications of these drawings in architectural practice teaching and research evaluations of more than 80 drawings and diagrams demonstrate how study drawings are active participants in rather than passive records of the designer s graphic thinking the author probes characteristics and properties of study drawings in addition to how graphic and cognitive processes combine to guide design decision making drawings of great past architects ranging from leonardo da vinci and le corbusier to carlo scarpa are analyzed excerpts are included from recent interviews with five contemporary architects joseph esherick helmut jahn robert stern stanley tiggerman and peter eisenman readers will learn from these masters how to enhance the value of study drawings in various design situations throughout the author clarifies how theoretical aspects of study drawings relate to actual design practice detailed chapters discuss key topics such as the theoretical structure of study drawings applications for handmade drawings how to make better use of current computer aided design cad systems examples of drafting room dialogue in practice that help improve design working processes architectural study drawings offers valuable insights that can be applied on the drawing board in the school and office in teaching of both media and design and in research and development for cad systems

in his latest work author paul c jorgensen takes his well honed craftsman s approach to mastering model based testing mbt to be expert at mbt a software tester has to understand it as a craft rather than an art this means a tester should have deep knowledge of the underlying subject and be well practiced in carrying out modeling and testing techniques judgment is needed as well as an understanding of mbt the tools the first part of the book helps testers in developing that judgment it starts with an overview of mbt and follows with an in depth treatment of nine different testing models with a chapter dedicated to each model these chapters are tied together by a pair of examples a simple insurance premium calculation and an event driven system that describes a garage door controller the book shows how simpler models flowcharts decision tables and uml activity charts express the important aspects of the insurance premium problem it also shows how transition based models finite state machines petri nets and statecharts are necessary for the garage door controller but are overkill for the insurance premium problem each chapter describes the extent to which a model can support mbt the second part of the book gives testers a greater understanding of mbt tools it examines six commercial mbt products presents the salient features of each product and demonstrates using the product on the insurance premium and the garage door

controller problems these chapters each conclude with advice on implementing mbt in an organization the last chapter describes six open source tools to round out a tester s knowledge of mbt in addition the book supports the international software testing qualifications board s istqb mbt syllabus for certification
