traditional books on aircraft propulsion for engineers tend to only address the thermodynamics and fluid mechanics necessary for static design of jet engines but the thrust response to throttle inputs is crucial to pilots in critical flight stages such as low level wind shear encounters go around and missed approaches in addition to the fundamentals of thermodynamics combustion fluid mechanics turbomachinery and gas dynamics this book also discusses the critical issues surrounding the dynamic behavior of jet engines several mathematical models are presented which describe the temporal and the frequency response of single and multi spool compressor turbine systems and delayed thrust response

this book focuses on new sensing technologies measurement techniques and their applications in medicine and healthcare specifically the book briefly describes the potential of smart sensors in the aforementioned applications collecting 24 articles selected and published in the special issue smart sensors for healthcare and medical applications we proposed this topic being aware of the pivotal role that smart sensors can play in the improvement of healthcare services in both acute and chronic conditions as well as in prevention for a healthy life and active aging the articles selected in this book cover a variety of topics related to the design validation and application of smart sensors to healthcare
